

HOUSING FOR ELECTRONIC CIRCUIT

5

ABSTRACT OF THE DISCLOSURE

10       A box unit is a housing having a space for  
containing a circuit board therein. Bus bars are insert-  
molded in a resin body of the box. A metal shield plate  
is insert-molded around the entire periphery of the box  
and outside the bus bars. As a result, the box has a  
shield and is reduced in size compared with a metal box.
